Yaesu ft-2900r frequency modification mars mod

This is has improved pictures
Bought the FT-2900R on 2/5/2010

Modified as follows:

Remove the bottom cover of the radio.

Carefully unplug and remove the speaker.

Remove all 3 of the knobs from the front of the radio.

You will need a metric allen wrench to remove the 3 front panel screws.

Carefully pull the front face of the radio away from the body being careful not to disconnect the ribbon cable.

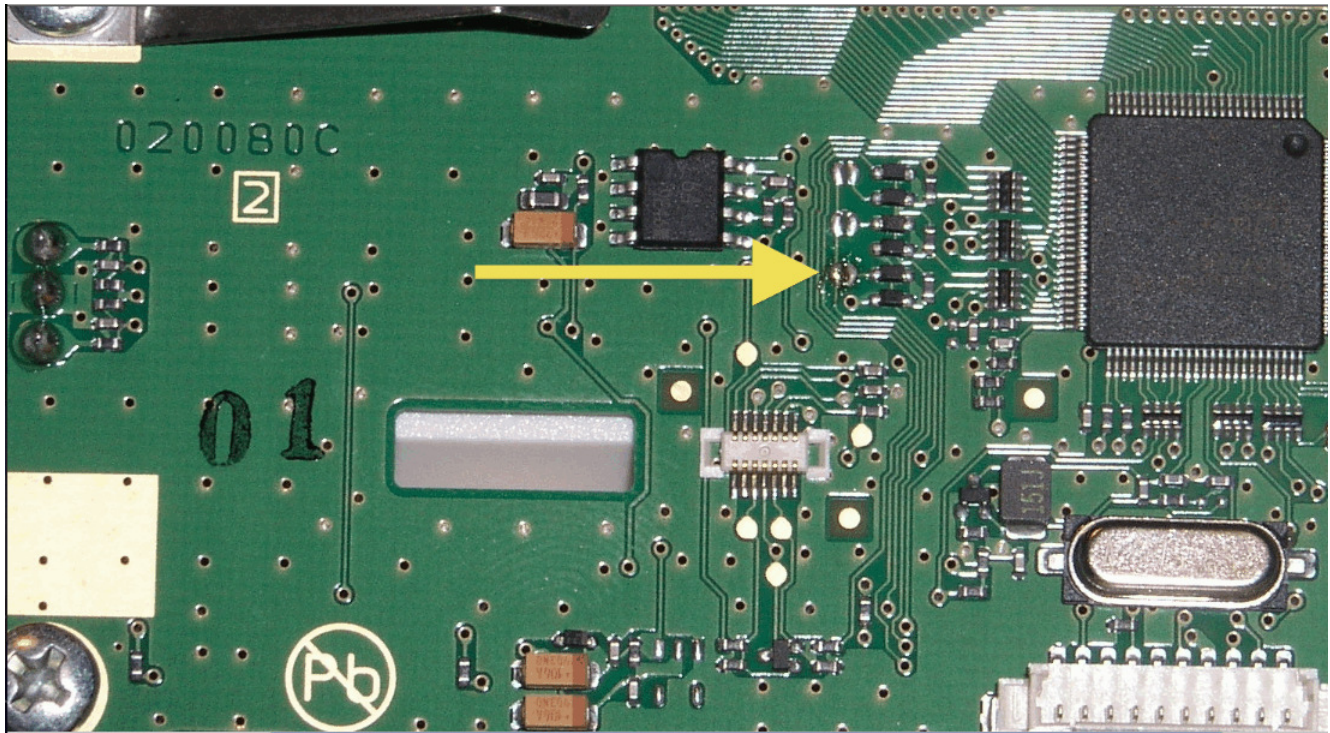

Look inside of the front cover for 3 pads (see picture)

Two of them are not solder jumpered and one is.

De-solder the only pad that is jumped with a solder bead.

Reassemble the radio.

While powering up the radio press and hold the

DW REV – A/N LOW – MW D/MR buttons simultaneously to perform a full reset. Confirm the reset when prompted by pushing **MV**

That's how I roll!!

🙄 I won't say what was going through my mind when I saw Bill with a new radio he was going to mod and the next picture showed the radio with "ERROR" on the screen. 🙄

Light travels faster than the speed of sound, this is why some people tend to appear bright, until they decide to speak.

Whats weird is both of my 2800M are modified but one I bought and it was modded and the other brandnew one is modded by pushing buttons on the faceplate and can be unmodded or reversed by pushing a few buttons. The other one must have been done internally because its not reversed by pushing buttons it stays modded.

""""was not thinking of a cber sat with his makita screwdriver winding round the presets untill his meter said s9+60db from a guy on a handheld 15 miles away""""

Extended talk mod.

Thanks for posting this. I did the mod, and it was VERY simple. The pictures you posted made it a breeze to find the solder pad. Did the mod, powered up the radio, did the reset, and radio works perfectly. Thanks a bunch.
